Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claim 1 is rejected under 35 U.S.C. 102(b) as being anticipated by Smith (US 4,735,626). Smith discloses an air freshner unit comprising a porous high density polyethylene having a pore size of 10 to 100 microns and a void volume between 30% to 55%, within the claimed ranges (column 2, lines 18-19, and 44-46). Smith discloses that a fragrance transfers through the high density polyethylene wicking material at a rate of 46 mg per 60 min, within the claimed range (table 3-continued). Smith does not specifically disclose that the fragrance does not leak from the wick material when the wick material is inverted. It appears that the air freshener unit meets all the structural limitations and chemistry as required in the claims, i.e, pore size, void volume ratio and transfer rate are within the claimed ranges. The pore size, void volume ratio and transfer rate of fragrance are critical in attaining the non-leakage of the fragrance from the wick material. It is the examiner's position that the fragrance does not substantially inherently leak from the wick material. It seems from the claim, if one meets the structure recited, the properties must be met or Applicant's claim is incomplete. This is in line with *In re Spada*, 15 USPQ 2d 1655 (1990) which

Art Unit: 1771

holds that products of identical chemical composition can not have mutually exclusive properties. Accordingly, Smith anticipates the claimed subject matter.

Response to Arguments

3. Applicant's arguments with respect to claim 1 have been considered but are moot in view of the new ground(s) of rejection.
4. The art rejections over Seidenberg in view of Kono have been overcome by the present amendment and response (see page 4 of Applicant's amendment filed on 01/05/2004).

Conclusion

5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. US 5,839,290 to Nazeri teaches a conventional polyethylene wick having a pore size, a void volume ratio within the claimed ranges. Nazeri does not specifically teach the wick being a high-density polyethylene material.
